Dispersions, Resins and Additives - BASF

Speak with your partners at BASF Performance and Formulation Additives to find the ideal light stabilizers for your formulations. We are equipped with broad application knowledge – from automotive and industrial coatings to wood, plastic and glass applications – and will work with you to co-innovate solutions that place your products in a class of their own. For more information, …

The Color of Art Pigment Database: Pigment Orange, PO

During the formulation of the coating the pH may evolve and the dispersion can become unstable and coagulate: If the initial pH is acidic a risk of coagulation of the particles is possible if the pH increases during the paint formulation. If the pH is basic, the dispersion can usually tolerate higher pH but not a lower one. Acrylic Resins – Commercial Grades for Paints, …

Adjuvants for Enhancing Herbicide Performance

BASF Construction Additives and Formulation Know-How for Construction Materials To drive sustainable development, we reviewed our entire portfolio under sustainability aspects by using the standardized “Sustainable Solution Steering Method*”. Looking at economic, environmental and social needs, we have identified key issues along the entire value chain for the …
02.09.2021 · Irgafos® 168 by BASF is tris(2,4-di-tert.-butylphenyl)phosphite. It is a hydrolytically stable phosphite processing stabilizer. Also acts as an antioxidant. It has low volatility and is particularly resistant to hydrolysis. Provides storage stability and give the polymer long term protection against thermo-oxidative degradation. It protects polymers which are prone to …

01.01.1999 · Formulation adjuvants are added to the active ingredient for a number of reasons including better mixing and handling, increased effectiveness and safety, better distribution, and drift reduction. These traits are accomplished by altering the solubility, volatility, specific gravity, corrosiveness, shelf-life, compatibility, or spreading and penetration characteristics. With the …

Preparing the formulation can be done through different systems: single shot (one step), quasi-prepolymer, and full prepolymer systems. The single-shot system involves preparing a premix of polyols, blowing agents, surfactants, catalysts, and additives which are then combined with isocyanates. Thus, the polymerization and gas generation process

**Super Absorbent Polymer Supplier | SOCO Tech**

09.02.2021 · BASF says that it is increasing the prices of its Neopentyl Glycol (NPG) and 1,6-Hexanediol (HDO) polyalcohols in Europe. NPG will have a price increase of €400 per mt, while HDO has an increase of €1.000 per mt. NPG is an intermediate used, for example, to produce polyester resins for coatings

**Viachem Inc.**

The feed additives industry is dominated by large multinational groups such BASF, DSM, CARGILL, and EVONIK, to name a few. Distribution to the end-user (the farmers) is usually ensured by companies formulating feed raw materials (e.g., cereals) with additives to produce ready-to-use complex feed recipes adapted to each animal specie, life stage, and production …

BASF dispersing agents product range for water-based systems. BASF dispersing agents product range for solvent-based systems (including 100% systems). BASF is the world’s leading chemical company – The Chemical Company. With more than 112,000 employees, six Verbund sites and 376 additional production sites worldwide we serve customers and
partners in almost all countries of the world.

**Dispersions & Resins - BASF**

Le laboratoire UMET (Unité Matériaux et Transformations - UMR CNRS 8207) concentre les activités « matériaux » au sein de la Fédération Chevreul de l'Université Lille 1. Il se décline en quatre équipes, ingénierie des systèmes polymères, matériaux moléculaires et thérapeutiques, métallurgie physique et génie des matériaux, et physique des minéraux, et associe une

**Irganox® 1076 (Antioxidant) by BASF - Technical Datasheet**

The addition of driers, siccatives, retardants and other additives can effect the drying time of any specific formulation, or they can be added by the artist to speed up or slow down the drying of oil paints. In some literature the oil absorption rate is given as ml/100g, although not technically the same as g/100g, for the purposes of this database they are close enough.

**Irgafos® 168 (Processing Aid) by BASF - Technical Datasheet**

02.09.2021 · Irganox® 1076 by BASF is octadecyl-3-[3,5-di-tert-butyl-4-hydroxyphenyl]propionate]. It is a highly efficient sterically hindered phenolic primary antioxidant. Provides processing and long-term thermal stabilization. It is odorless, stable to light and has excellent color retention. It protects the
substrates against thermo-oxidative degradation. It has …
